**Session Information: Brush Up on Current Ramping**

The session is open for registration.

**Session status:** Not Started ([Registration](#))

**Session date:** Wednesday, February 25, 2009

**Starting time:** 7:00 pm, Eastern Standard Time (GMT -05:00, New York)

**Duration:** 1 hour

**Presenters:** G Truglia

**Description:** This webcast is designed for techs who need to know how to set up their low amp / current probes on labscopes. We will demonstrate how to set up your amp / current probe on a labscope so you can measure current on injectors, fuel pumps and ignition coils. In the webcast we will display sample waveforms so you can determine and interpret common DC current waveforms. We will be using the two most common low amp / current clamps, the Fluke 80i-110 and the PDI CA-60 along with the Modis labscope and the Fluke 196 (the Fluke 97 and 98 are very similar to the 196) labscopes.

**Description:** Using Your Scan Tool with Mode 6 covers: After a brief ten minute overview of Mode 6, we use live demonstrations and interactive use of the ATS EScan, AutoEnginuity, OTC Genisys/ Nemisys, and Snap On Modis/Solusin order to walk you through each scan tool's different abilities and options. Don't let your expensive scan tools collect dust. Maximize their use, hone your diagnosis, and make more money! Instruction will last 1.5 hours, leaving 30 minutes for questions and answers. If you can, bring your PC-based scan tool! You can ask the instructor questions by typing or (speaking, this requires a headset). During Q and A, the instructor can take control of your PC base scan tool and teach you "hands on" via the computer.
